

MONARC[®]

INTERIOR WALL PANELS

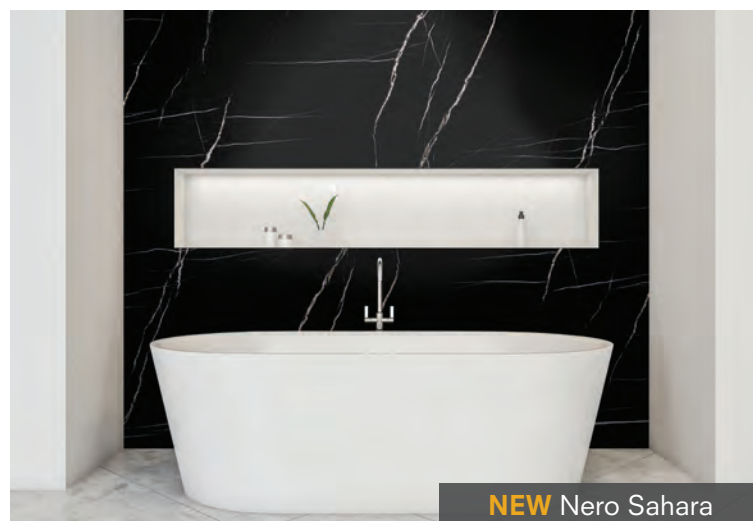

Calcutta Marble Gold

TRANSFORMING INTERIOR SPACES.

High Quality • Lightweight • Low Maintenance • Class A Fire Rating • Non-Absorbent • Cost Effective Install

A specialized, proprietary manufacturing process allows for the production of high quality finishes on 3mm aluminum composite wall panels for use in the design and construction of shower & bath enclosures, kitchens & backsplashes, feature walls & lobbies, hospital headwalls & medical offices, and other interior spaces.

The premium properties of MONARC ensure an extremely flat, lightweight, non-absorbent panel that offers easy installation and delivers a striking visual appearance inspired by natural elements such as wood, stone, and metal.

NEW Nero Sahara

The Quarry Collection

Our finishes are meticulously crafted to mirror the stunning beauty and refinement of natural stone, providing not only aesthetic appeal but also enhanced durability and easy maintenance. A perfect choice for any space, combining beauty with practicality. The Quarry Collection offers a pragmatic solution for individuals seeking the elegance and sophistication of natural stone slabs without the burdensome maintenance.

*Also available in Metallic

The Abstract Collection

Inspired by classic interiors and artistic expression, the Abstract Collection introduces subtle movement & pattern to transform ordinary walls into stunning design features. Featuring an eclectic mix of linen-inspired surfaces, soft geometrics, and understated patterns, these designs create depth & interest while offering the versatility to complement a wide range of transitional commercial & residential environments that balance creativity with timeless appeal.

NOTE: Metallic designs are directional and panel orientation matters. Install all metallic panels in the same direction to avoid color shift between panels. Natural variations in shade and tone are inherent characteristics of metallic coils. It is strongly recommended to order all project material at one time to avoid lot inconsistency & minimize panel-to-panel differences.

The Woodland Collection

Elevate your space with MONARC Wood Finishes – where classic elegance meets modern convenience. By seamlessly blending style and function, these panels provide unparalleled durability, formability, and moisture resistance, making them ideal for those seeking a reliable solution that also exudes elegance and sophistication.

* Please note color variations may occur between the print brochure and the actual sample due to differences in printing processes and materials. We recommend referencing the physical sample for accurate color representation.

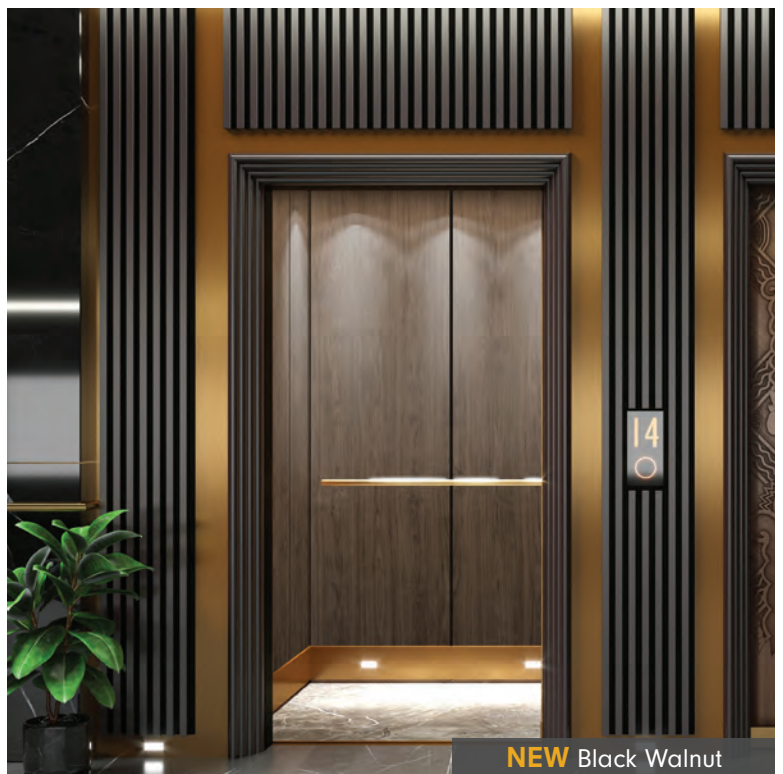

The Urbanesque Collection

Inspired by raw materials from the industrial age and the evolution of urban landscapes, these finishes combine color, luster, and depth to truly transform any interior space. From an abstract accent wall to a contemporary kitchen backsplash, they offer a chic and modern appearance that's easy to install and maintain at a fraction of the cost of conventional materials.

NEW Soho & Snowdrift White

NEW Black Walnut

Unhinged

Calcutta Marble

High Quality

State of the art technology allows for the creation of a lightweight, fire retardant metal panel with a premium surface that offers the appearance of authentic materials.

Made in America*

Cost Effective Installation

Thin panel construction requires no trim work or grouting, and provides a significant weight reduction allowing for easier transport, handling and installation. It can also be easily cut and fabricated, even using hand tools.

Low Maintenance

Offers exceptional durability* and ease of cleaning for high traffic interiors. High quality finishes are resistant to fading and surface damage.

*Based on Taber Wear Index per ASTM D4060 with average of 41 ± 18

Non-Absorbent

Meets the rigorous building code non-absorbent* surface requirement for wall surfaces in showers & bathtubs.

*Tested per ASTM D570 with absorption rate <0.1% over 24 hours.

Material Composition

Two sheets of premium .012" aluminum bonded to a fire retardant mineral core to create a rigid and durable aluminum composite panel specially designed for interior applications.

Fire Rated

Self-Extinguishing; Class A Fire Rating (ASTM E84).

Lightweight

Lighter than traditional construction materials allowing for easier handling & faster installation. Panel weight of 1.15 lbs/sf.

Fabrication

Can be easily cut or routed on-site using standard ACM hand tools for fast and easy installations, or to meet custom space specifications.

Flatness & Rigidity

Meets design intent with its high strength-to-weight ratio, ensuring a lightweight panel that maintains extreme flatness long after installation.
